More than Ropes.

Gleistein

Gleistein

More than Ropes.

Breathtaking designs, finest materials, splendid craftsmanship – every superyacht is uniquely individual with only the best equipment being good enough. With its premium products delivering outstanding performance at the lowest possible weight, extreme service life, and finishing par excellence, Gleistein has secured a position for fitting out the world’s most exclusive superyachts, like no other rope manufacturer.

More for your mooring

**For a reason:
Gleistein moors 45 of
the world’s 55 largest
superyachts!**

Superyachts are made to move elegantly, but they also grace the harbours. And for mooring lines, the work begins when the vessel comes to rest: they provide support and cushion shocks, but must also be strong and flexible. Gleistein’s premium solutions boast unparalleled quality – in combination with our meticulously optimised designs, they offer the best conditions for safe mooring, first-class shock absorption, and long service life.

Safe mooring with our FLX System

GeoTwin® Polyester

Classic mooring lines comfortable, durable, economical

Made of high-tenacity fibres with balanced stretching properties, classic mooring lines, like our GeoTwin® Polyester, offer solid support and highest comfort. They are not only economical, but have long proven their superiority to competitor’s alternatives due to their longevity.

FLX Mooring System lightweight, compact, sustainable investment

Wear and tear of mooring lines is inevitable – so they must be regularly replaced. With the FLX Mooring System, an inexpensive and easy-to-replace tail acts as a sacrificial element to do the “dirty work”. In this way, the high-performance main line made with Dyneema®, is effectively protected. This means that the investment will pay off in just a few short years. Furthermore, the solution requires substantially less space on board than a conventional line and the ensemble weighs just a fraction.

Like racing, but much bigger

Sheets and halyards for highest requirements

When it comes to outfitting your superyacht with the finest rigging, we do not only provide a comprehensive range of maximum-performance sheets and halyards in every dimension. We also offer individual customisations of any kind.

And with our team of experts being committed to providing you with knowledgeable guidance, Gleistein ensures that you have the right equipment perfectly tailored to your requirements.

Powerful, economical, and sustainable: you will already find a lot of suitable solutions to the demands of the contemporary world in our huge product range. But the world keeps on turning and Gleistein is the perfect partner for taking on new challenges.

Now it is your turn to challenge us: We develop connection solutions for your individual needs, setting standards time and again!

Superior solutions

Gleistein provides perfectly fine-tuned system components based on fibre ropes

Never running out!

In the world of sailing, precision and performance are paramount. Gleistein's ropes are not just components; they are intricate rope systems expertly tailored to each individual ship, to perfectly fit every captive winch and all other rope guiding elements on board. They boast exceptional bending fatigue properties and abrasion resistance while offering unparalleled control, even when facing the strongest forces.

So they can run, and run, and run...

The ultimate challenge for rope performance and longevity

Over the bend!

Gleistein's DynaOne® HS GeoBend replaces the wire ropes in an existing davit system without any modifications being required. The rope, which is specially designed to handle alternating bends under load, significantly exceeds the strength of an equally dimensioned wire rope and thereby allows for an even higher safety factor. That's why it has also received the strict DNV Type Approval Certification for manned tender boats.

The first textile davit rope with DNV approval

Length runs –
just like
our ropes...

Lightweight, noble, safe –
and always perfectly tailored

Guard your steps!

Only a robust railing offers real protection against a fall overboard. Most guard rails are made of stainless steel and are therefore hard, heavy, and inflexible. Gleistein offers the perfect alternative: an attractive, minimal stretch guard rail, which offers maximum safety with reduced risk of injury in a lightweight, flexible material. It is integrated into a system of stainless steel fittings and is custom made to suit every vessel.

More than Ropes

The right rope is only the beginning – our service goes much further!

Finding a superior connection solution starts with your requirements.

Our skilled consultants are always available to you, listen carefully and guide you to the right solution.

The Gleistein team accompanies you from the initial idea to application and far beyond.

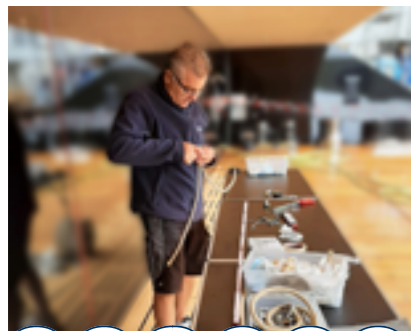

Founded in 1824 Gleistein is and will remain the oldest industrial family business in Bremen – not least because sustainability has been a fundamental principle for us since the very beginning. For this reason, we consistently implement the highest standards when it comes to resource-conscious and ethically responsible production and application of our products.

We have come to stay!

The finishing touch

What a high-quality rope promises, its end connection must uphold! For every Gleistein rope, there is a specific splicing procedure that brings out its full potential. At Gleistein's service centre more than 30 professionals craft industrial ropes by hand every day to create individual, ready-made solutions.

Installation on board

For a future worth living

The most elegant ships in the world are of no use if the oceans degenerate into rubbish dumps. And with decisions we make today, we shape the world of tomorrow. Gleistein has been making decisions for a long time: For sustainable products with the longest service life, constant commitment to eliminating CO2 emissions, and for promoting initiatives for the long-term preservation of the environment and nature.

Peace of mind in the long run

The most sustainable rope would be one that never breaks. And we are already close! But even ropes from Gleistein age over time, need to be regularly inspected, repaired, and replaced one day. With smart digital solutions like our Gleistein Tracking System and integrated NFC chips, Gleistein accompanies all ropes on board for the long-term safe preservation of your valuable asset.

As individual as you

Your yacht deserves rope solutions that not only match from a technical perspective, but also in terms of style. Exquisite fibre compositions and colour combinations are therefore characteristic of our superyacht lines. With Gleistein, all superyacht lines are tailor made – meaning there are virtually no design limits.

Because we care

If a connection is to last, choosing the right rope is not enough, you also need to use it properly. To ensure this, Gleistein is always available to offer advice and support. Regardless of where your vessel is located – we offer professional installation, inspection, and customised training programmes worldwide.
